

Stella Doradus

Sentinel

Protecting your repeater installation

Sentinel

- Continuous monitoring of uplink spectrum.
- All cellular bands monitored.
- Any anomalies logged on StellaControl.
- Spectrum history logged on StellaControl.
- Live view of spectrum.
- Ensures building safety on the operators network.
- Ensure safety from the regulator.

LIVE MONITORING ON ALL BANDS

Any potential noise source from building is logged. Alert is triggered.

OPERATOR PROTECTION

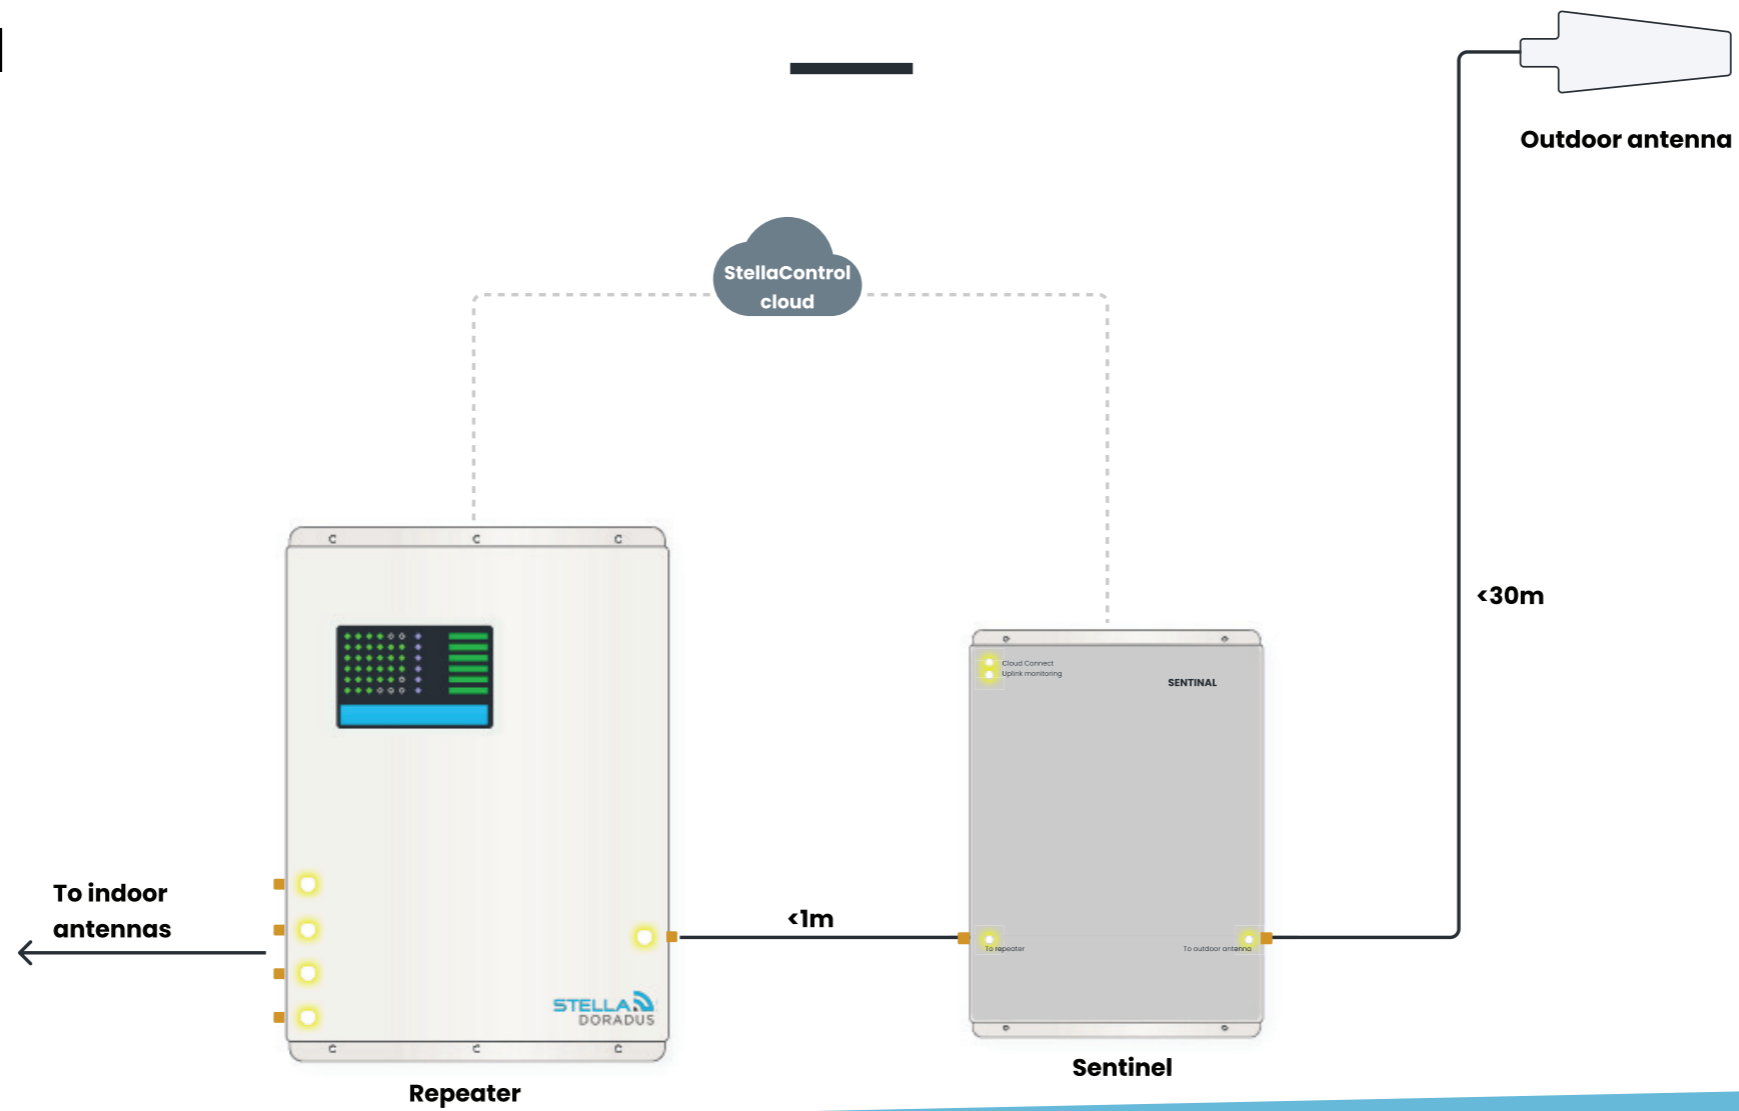

All operators networks are protected.

REMOTE SCANNING

Scan the outdoor signal for all operators. 5G included.

Sentinel

The Sentinel is an advanced uplink-noise monitoring device designed to give installers complete confidence in their repeater installations.

By continuously monitoring uplink noise levels from the repeater and connected antennas, the Sentinel ensures that no harmful interference is generated toward mobile network operators. With real-time monitoring and automatic alerts, it provides peace of mind that the system remains compliant, stable, and operator-friendly — allowing installers to truly sleep at night knowing the network is protected.
